Periodic Inspection Report

Penny Slough Drainage & Levee District

Prepared By: United States Army Corps of Engineers – Nashville District

Prepared For: United States Army Corps of Engineers – Rock Island District

Sep 6, 2012

PREFACE

The purpose of this levee system periodic inspection is to identify deficiencies that pose hazards to human life or property. This assessment of the general condition of the levee system is based on available data and visual inspections. Detailed investigation and analysis involving hydrologic design, topographic mapping, subsurface investigations, testing and detailed computational evaluations is beyond the scope of this levee system inspection. The inspection is intended to identify the issues to facilitate such future studies and associated repairs as appropriate.

This levee system inspection is based on observations of field conditions and available data at the time of inspection. The condition of any levee system depends on numerous and constantly changing internal and external conditions and is evolutionary in nature. It is incorrect to assume the present condition in the future. Only through continued inspection, maintenance, repair, rehabilitation can there be a reasonable chance that unsafe conditions can be avoided.

EXECUTIVE SUMMARY

Periodic Inspection Results for the Penny Slough Drainage & Levee District, Whiteside and Henry Counties, Illinois

The Penny Slough Drainage & Levee District levee is a federally constructed and non-federally operated and maintained flood protection project.

The Penny Slough project is located on the left bank of the Rock River between river miles 26 and 36 in Whiteside and Henry Counties, Illinois. The project was completed in the 1940s.

The Penny Slough Drainage & Levee District is responsible for operating and maintaining the levee system.

The five year Periodic Inspection of the Penny Slough Drainage & Levee District levee system occurred on April 3 and 4, 2012. The local sponsor does not show an active response to operation and maintenance of the project. Deficiencies were noted and actions are required. The overall system rating recommended by the Nashville District who conducted the inspection was Unacceptable based on the deficiencies identified in the report.

The Rock Island District received comments from the Sponsor in response to the draft Periodic Inspection Report. Those comments and responses were considered during the levee risk analysis used to determine the final inspection rating. Several deficiencies were determined to be temporary conditions allowing the rating of the system to be appropriately based on an engineering determination of risk.

The Rock Island District has determined that the existing departures from USACE National standards identified during the Periodic Inspection result in an appropriate rating of the levee system as **Unacceptable**.

Issues that could impair the operation of the system and are in the most need of action:

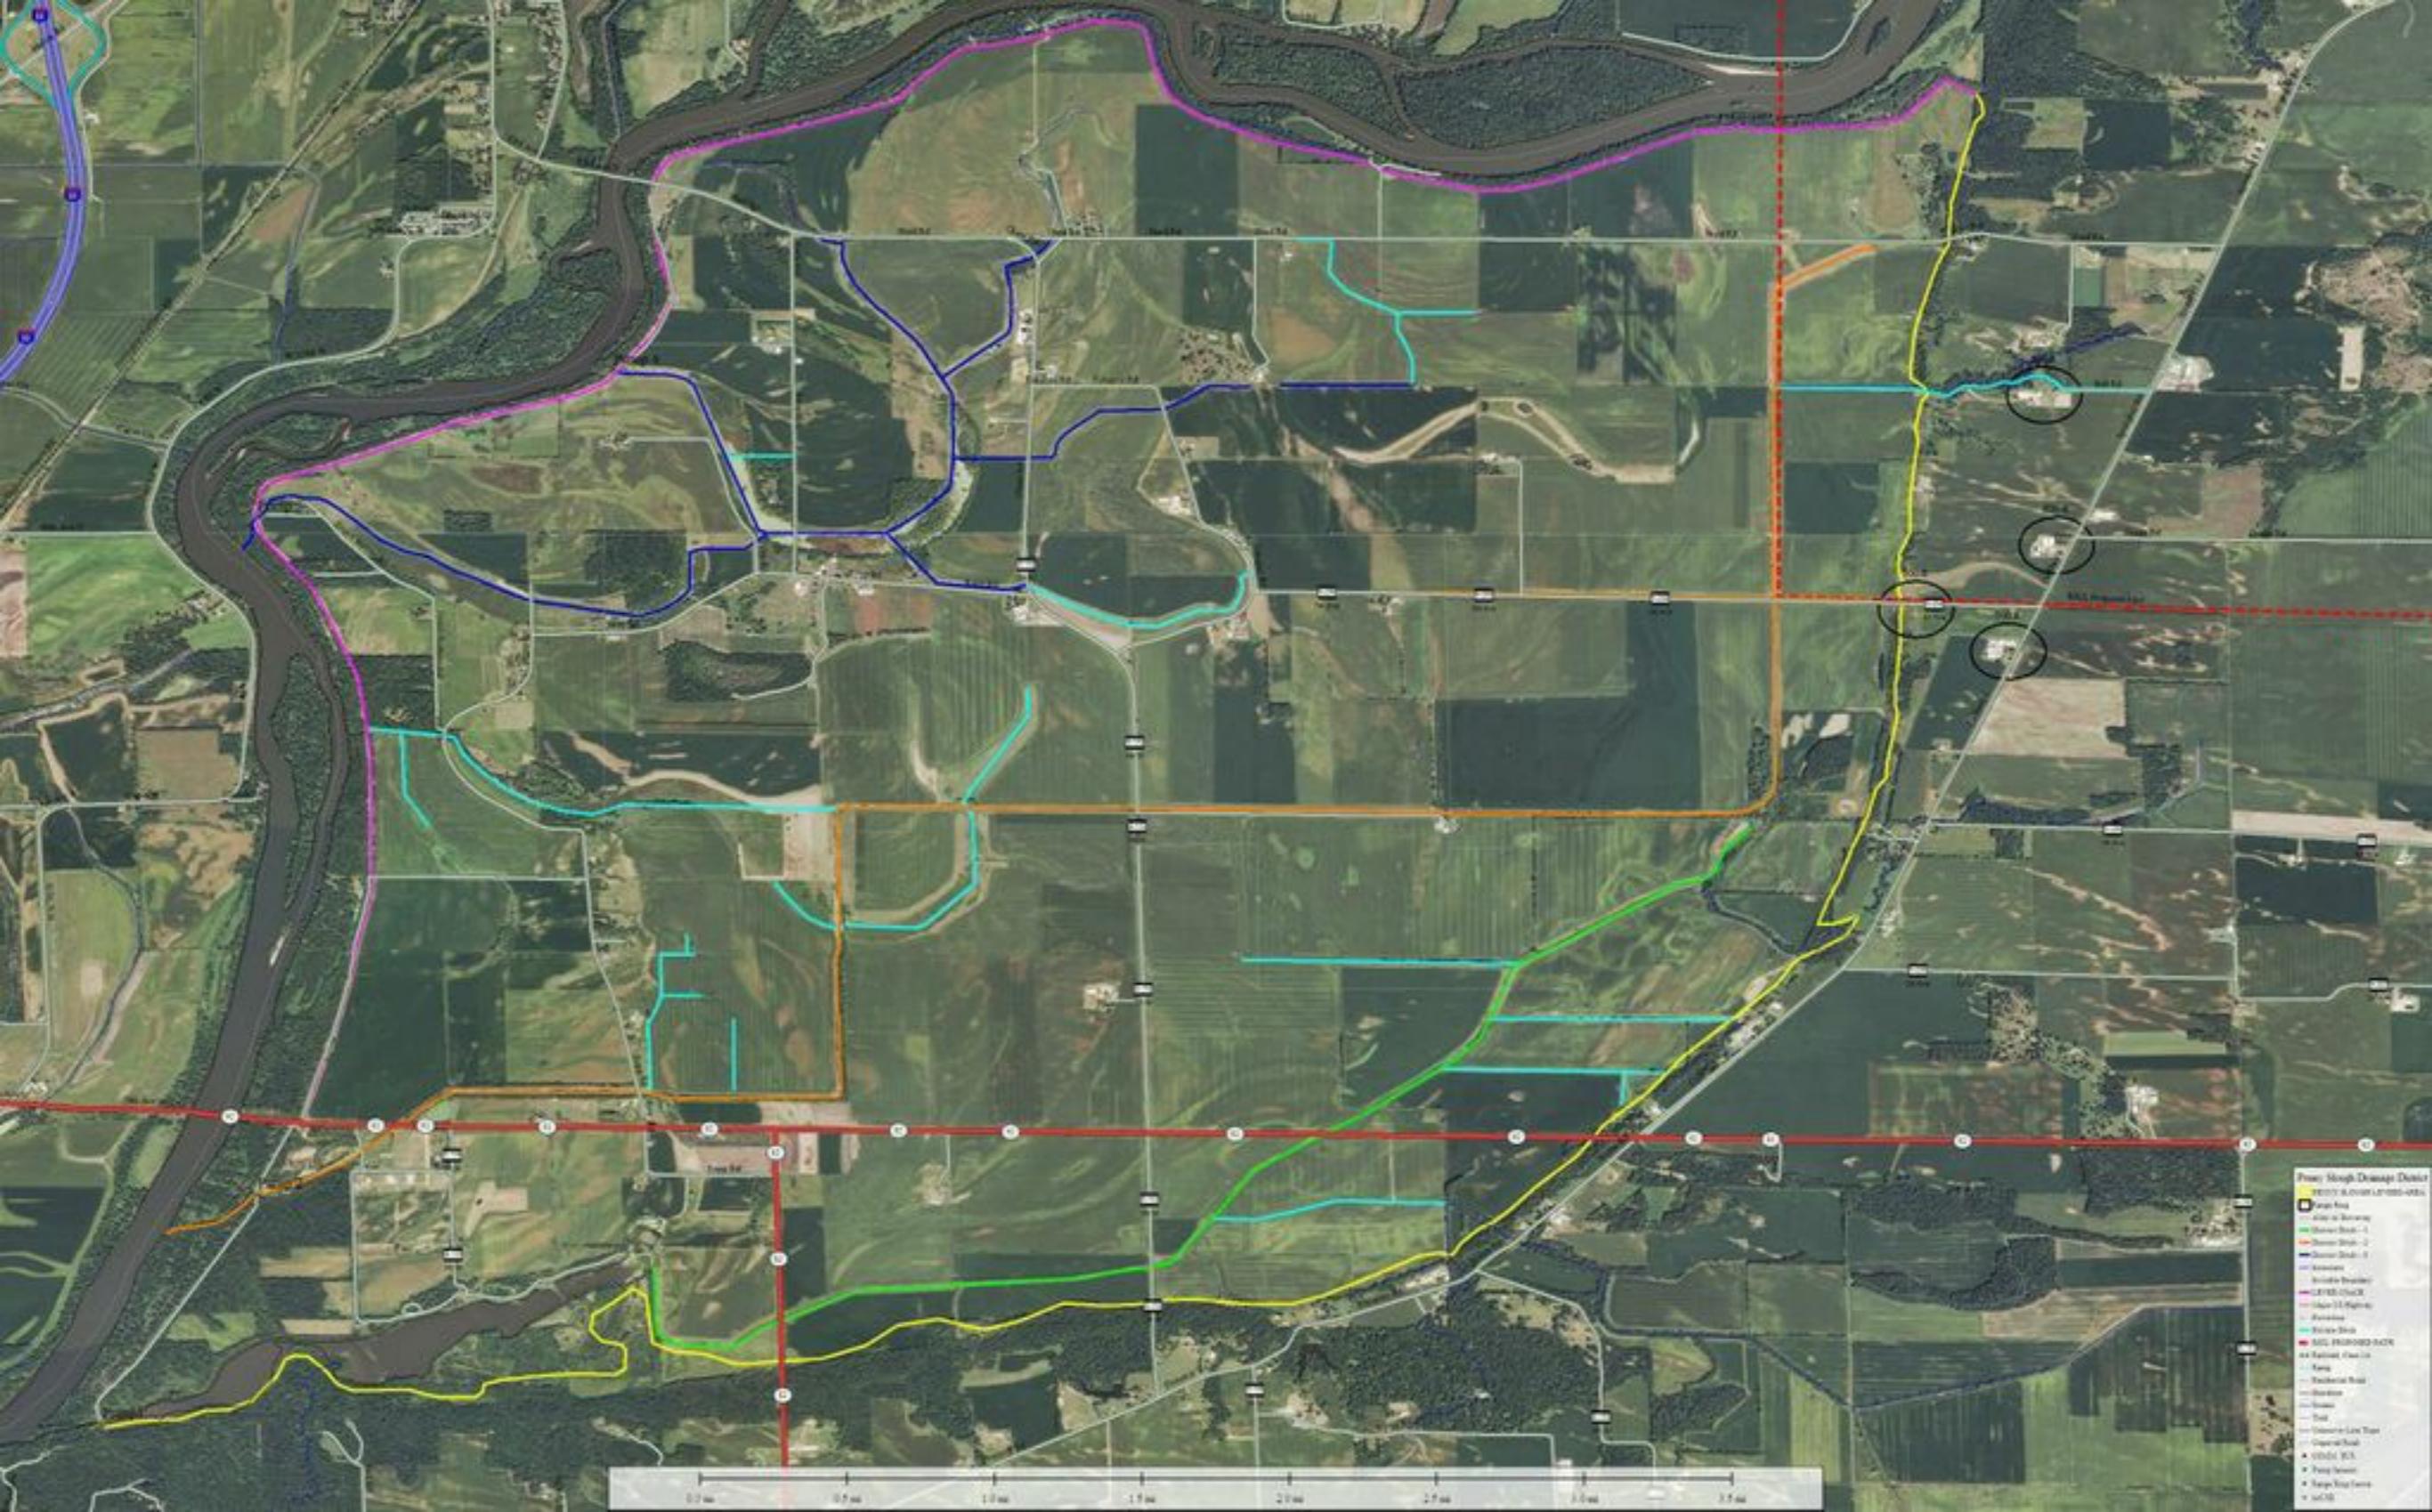

- Undesirable vegetation is present within the vegetation-free zone of the levee system as defined by ETL 1110-2-571.
- Numerous deficiencies were observed at the various pump stations regarding the operability of the pumps, maintenance practices of the equipment and general documentation.
- The communication and coordination efforts with the local sponsor need to be improved.

The next annual Inspection will be scheduled to be performed in 2013, with periodic inspections currently scheduled every five years.
